

Which solar panel is best for your home?

Monocrystalline panels are the most expensive and most efficient but are also the most common and comprise the best solar setup for home energy. Polycrystalline panels come in second and thin-film panels are the least efficient overall. Most solar panel manufacturers provide monocrystalline systems nowadays.

How much energy do solar panels produce?

To answer this, we need to look at how much energy solar panels can generate. Most home panels can each produce between 250 and 400 Watts per hour. According to the Renewable Energy Hub, domestic solar panel systems usually range in size from around 1 kW to 5 kW.

Will Solar Power Cover my Home's use?

So you might not always generate enough solar power to cover your home's use. During summer, you'll probably be able to power your home, and even have excess. But you might not generate enough power through the darker months to power your home. So, even if you use batteries, you might still need to top up with electricity from the grid.

Are solar panels a good investment?

Solar panels for your home are a great investment that can noticeably reduce your electricity bill. Read our comprehensive guide to find out how solar panels work on a house and what you need to think about before solar panel installation. Are you considering installing solar panels and wondering about the cost and benefits?

How do solar panels work in the UK?

Installing solar panels lets you use free, renewable, clean electricity to power your appliances. You can sell extra electricity to the grid or store it for later use. There are over 1.3 million installations on homes across the UK - see where the UK solar panel hotspots are. Let's look at how they work and whether they're suitable for your home.

Can a home solar system save you money?

A typical home solar panel system could save around one tonne of carbon per year, depending on where you live in the UK. That's the equivalent of driving 3,600 miles, or from London to Bristol 30 times. Export the electricity you can't use yourself and get paid for it. The Smart Export Guarantee lets you sell extra electricity to the grid.

Hybrid solar power provides a constant power supply to your house. With this inverter, you can sell excess-produced solar electricity to the utility provider. Also, this ...
