What is a solar panel / PV module?

Solar PV Panels /PV Modules - The head end of a PV system that converts daylight into electrical current. As well as traditional Solar Panels,Solar PV panels can also be integrated into building materials where you may have traditionally used glass such as into canopies,skylights and balconies.

What are integrated solar panels?

Integrated solar panels - also referred to as in-roof panels - are essentially the same as traditional solar panels, but are embedded into a tileless section of roof.

How do integrated solar panels work?

Integrated solar panels are installed in the structure of your roof. They work like traditional solar panels,absorbing sunlight and converting it into electricity for your home. What are the disadvantages of integrated solar panels?

Are integrated solar panels right for You?

If you want to enjoy all the benefits of solar panels without compromising on your home's aesthetic appeal,then integrated solar panels might just be the best option for you. Once installed,you can enjoy free clean electricity from your solar system,as well as annual savings of up to \$1,005.

How do roof-integrated solar panels work?

Technically,roof-integrated solar panels function just like traditional solar panels or solar roof tiles,using photovoltaic cells to convert sunlight into electricity. However,instead of sitting on top of the roof on visible brackets that can affect your home's aesthetic appeal,they become a part of the roof structure itself.

Are integrated solar panels waterproof?

Unlike regular solar panels (also called 'on-roof panels'),integrated panels need minimal mounting equipment,and the support that is there is hidden out of sight underneath the panels. In-roof panels are also designed to behave like roof tiles - they're weatherproof,waterproof,and can be as strong as normal roof tiles.
