Can solar power save you money?

Solar electricity is a clean, renewable energy source. A typical home solar panel system could save around one tonne of carbon per year, depending on where you live in the UK. That's the equivalent of driving 3,600 miles, or from London to Bristol 30 times. Export the electricity you can't use yourself and get paid for it.

What are the benefits of solar energy?

Solar energy has many perks, from saving money to helping the environment. Here's a quick breakdown of the main advantages. Solar energy can slash your energy bills. Solar energy is more affordable and sustainable compared to other sources.

How much do solar panels cost?

The price of a typical 3.5 kilowatt-peak PV solar panel system is about £7,000. Based on the Energy Saving Trust's figures, it could take someone living in the middle of the country, in a typical home, anywhere between 11 and 14 years to recoup the costs of installing panels, based on current Energy Price Cap rates.

The Smart Export Guarantee lets you sell extra electricity to the grid.

What are the disadvantages of solar energy?

While solar energy has many advantages, there are also some drawbacks. Here's a quick look at the main points: The biggest hurdle for many homeowners is the initial cost of installing a solar panel system. An average 4kWh solar energy system will cost, on average, £12,000 in the UK.

How much energy does a solar heat pump use?

An average home in the UK would need an air-source heat pump that requires roughly 4,000kWh of electricity a year to power it - which you can get with a 5.6kW solar panel system. But this will leave little extra energy to power the rest of your home, so you'd still be reliant on the grid to some extent.
