

What causes a perovskite solar cell to degrade?

When it comes to perovskite solar cells employing charge-transporting layers (CTLs) and electrodes, causes and pathways of perovskite degradation become more diverse as the whole system is more complicated.

Does hysteresis cause device degradation of perovskite solar cells?

The understanding of the origins of device degradation of perovskite solar cells remains limited. Here, the authors establish hysteresis as a diagnostic key to unveil and remedy degradation issues and investigate the relations between characteristic J-V hysteresis features and device deficiencies.
