

The main technical indicators of solid-state batteries

Are solid-state batteries a key performance indicator?

Solid-state batteries (SSBs) using solid electrolytes, which are under development and could reach the market in the coming years, offer the promise of improving several important key performance indicators (KPIs).

What are the main interests of a solid state battery?

Current key interests include solid-state batteries, solid electrolytes, and solid electrolyte interfaces. He is particularly interested in kinetics at interfaces. Abstract Solid-state batteries are considered as a reasonable further development of lithium-ion batteries with liquid electrolytes.

What is a solid-state battery (SSB)?

A solid-state battery (SSB) is an electrical battery that uses a solid electrolyte for ionic conduction between the electrodes, instead of the liquid or gel polymer electrolytes found in conventional batteries. Solid-state batteries theoretically offer much higher energy density than the typical lithium-ion or lithium polymer batteries.

Are solid-state lithium batteries the future of energy storage?

Abstract In recent years, solid-state lithium batteries (SSLBs) using solid electrolytes (SEs) have been widely recognized as the key next-generation energy storage technology due to its high safety, high energy density, long cycle life, good rate performance and wide operating temperature range.

How does interface instability affect a solid-state lithium ion battery?

All solid-state LIBs' electrochemical performances are significantly impacted by the electrodes/electrolyte issue at the interface. The interface instability based on electrolyte and electrode side reactions has a negative impact on the cycle life and rate capability of batteries.

What is a solid-state battery?

In 2017, John Goodenough, the co-inventor of Li-ion batteries, unveiled a solid-state glass battery, using a glass electrolyte and an alkali-metal anode consisting of lithium, sodium or potassium. Later that year, Toyota extended its decades-long partnership with Panasonic to include collaboration on solid-state batteries.
