Chinese battery EV imports have surged into the European market since 2020, growing by a staggering 1,646 per cent from 2020 to 2023, compared with a more modest 325 per cent growth in total battery EV imports into the bloc.

Are lithium batteries a good choice?

Compared to traditional batteries they're smaller, have low discharge rates, fast recharge times and can have up to 25 times the energy density compared to the type of battery you'd normally find in a car. However Lithium is not the most stable element and there are strict regulations in place when transporting them.

What percentage of battery EV sales come from China?

In 2023, Chinese imports accounted for 26 per cent of new battery EV sales in the EU, compared with 19 per cent from other countries and 55 per cent from domestic manufacturers (Chart 5).

Are lithium batteries safe to ship?

However Lithium is not the most stable element and there are strict regulations in place when transporting them. What issues come with shipping Lithium batteries?

a number of steps to combine several elements (e.g. Ni, Mn, Co, Li) in appropriate concentrations); then manufacture of the components of the battery cell; and finally the complete lithium-ion battery. Stage 5: the use stage comprises the incorporation of the battery into a consumer product, and its use.

(ICE) vehicles. In addition, EV demand growth is also partly attributable to declining battery prices and government incentives to defray costs. 3 These lower battery prices reflect LIB cost improvements in the global supply chain (GSC) for key LIB ...
