## Two sets of lithium battery packs connected in series

What does it mean to connect batteries in a series?

Connecting batteries in series is when you tethertwo or more batteries to boost the battery system's overall voltage. It's worth noting that connecting batteries in a series doesn't increase ampere capacity. The batteries are tethered end-to-end by connecting the positive terminal of one battery to the negative terminal of the next one.

Can ionic lithium batteries be used in a series connection?

Most batteries in series combinations feature sealed lead acid batteries. However,most (not all)ionic lithium batteries can also be used in a series connection. It comes down to the Battery Management System or the Protection Circuit Module in question.

How to wire multiple batteries in series?

To wire multiple batteries in series, connect the negative terminal (-) of one battery to the positive terminal (+) of another, and do the same to the rest. Take Renogy 12V 200Ah Core Series LiFePO4 Battery as an example. You can connect up to 4 such batteries in series. In this system, the system voltage and current are calculated as follows:

How many lithium ion cells are connected in series?

The fourlithium-ion cells of 3.6 V connected in series will give you 14.4 V, and this configuration is called 4S because four cells are connected in series. The number of cells can be varied according to the voltage of a single cell.

How many batteries can be wired in series?

The number of batteries you can wire in series, parallel, or series-parallel depends on the specific application and the capabilities of the battery bank you are building. For details, refer to the user manual of the specific battery or contact the battery manufacturer if necessary.

What types of batteries can be connected in parallel?

Flow batteries and other chemistries. These are commonly available in 48V. Multiple batteries can connect in parallel without any issues. Each battery has its own battery management system. Together they will generate a total state of charge value for the whole battery bank. A GX monitoring device is needed in the system.
