What is a sodium battery

A sodium-ion battery is a type of rechargeable battery that uses sodium ions as the charge carriers. Similar in structure to lithium-ion batteries, sodium-ion batteries consist of a cathode, an anode, and an electrolyte. The cathode typically contains a sodium-based material, while the anode can be made of materials such as hard carbon or ...

The cost analysis of sodium-ion battery cells indicates a potential cost advantage over lithium-ion cells. It is estimated that sodium-ion battery cells could cost around \$40-80/kWh compared to an average of \$120/kWh for lithium-ion cells, making them a more economical option for energy storage applications. Sustainability Considerations

Sodium is similar to lithium in some ways, and cells made with the material can reach similar voltages to lithium-ion cells (meaning the chemical reactions that power the battery will be nearly as ...

Sodium ion battery is a new promising alternative to part of the lithium ion battery secondary battery, because of its high energy density, low raw material costs and good safety performance, etc., in the field of large-scale energy storage power plants and other applications have broad prospects, the current high-performance sodium ion battery still has low cycle stability, low ...
