

What is a battery code?

Battery Codes: Battery codes are typically found on the battery and consist of a sequence of numbers and letters indicating the battery's technical characteristics. These codes reveal the battery's voltage, amperage, dimensions, and manufacturing date. Knowing the correct battery code can assist you in selecting the right battery for your vehicle.

What does a battery size code mean?

Certain sizes, given by one or two digit numbers, represent standard size codes from previous editions of the standard. Sizes given as 4 or more digits indicate the diameter of the battery and the overall height. The numbers in the code correlate with the battery dimensions.

What is the complete nomenclature for a battery?

The complete nomenclature for a battery specifies size, chemistry, terminal arrangement, and special characteristics. The same physically interchangeable cell size or battery size may have widely different characteristics; physical interchangeability is not the sole factor in substituting a battery. [1]

What does a car battery number mean?

Car battery numbers provide essential information such as group size, cold cranking amps (CCA), reserve capacity (RC), and ampere-hour (Ah) ratings. Group size refers to the battery's dimensions and terminal placement, while CCA measures the battery's ability to start in cold weather. Car batteries are vital to the functionality of your vehicle.

What is a battery designation system?

The current designation system was adopted in 1992. Battery types are designated with a letter/number sequence indicating number of cells, cell chemistry, cell shape, dimensions, and special characteristics. Certain cell designations from earlier revisions of the standard have been retained.

What is a UK vehicle battery code?

UK Vehicle Battery Codes provide vital information about the battery's type, size, and capacity. Each segment of the code has a distinct meaning: **Battery Type:** This indicates the specific function and technology of the battery.

For the Model 3 and Model Y, battery types and chemistries are varied. The Model 3 started out with the same 18650 NCA battery packs as the Model S / Model X. Later iterations (and manufacturers other than Panasonic)
