

What to do if the lead-acid battery is cracked

Where can I get rid of a lead acid battery?

If you just want to get rid of it, you can probably drop it off anywhere that sells lead acid batteries (call first to make sure). What has happened is that the plastic housing has cracked, electrolyte has leaked out and evaporated, leaving white crystalline solid material behind. That is the crust.

Can lead acid batteries cause a case to crack?

Sealed lead acid batteries, especially those with gel based batteries, have the possibility of acid seeping out and causing corrosion to the materials in the surrounding areas, including the case. As such, batteries with cracked cases should always be replaced immediately.

Can an SLA Battery leak acid?

Although an SLA (Sealed Lead Acid) Battery does not leak acid directly, there is a risk that its life-cycle and capabilities will be reduced if the battery ages. Acid may eventually start seeping out and cause corrosion to the surrounding materials, especially with gel based batteries.

Can you fix a cracked battery?

Batteries fumes are toxic and flammable. Don't attempt to fix a cracked sealed battery when the crack is below the acid line. This is because even if you get the glue/epoxy patch to work for more than a few hours, there is no way to replace the lost battery fluid. It would reduce your battery performance.

How do you fix a broken engine battery?

Battery acid all over your engine compartment will lead to expensive repairs, for me it's better to bite the bullet and replace the battery. Had experience trying to repair damaged battery cases, splits, punctures etc. Depending on the plastic, the most reliable solution was to use a soldering iron to melt the material.

Is a lead acid battery a hazard?

There is also a chemical hazard because the electrolyte is corrosive and contains lead. You should try to keep that crust off of anything you care about because it may absorb a little moisture from the air and dissolve or damage whatever it comes into contact with. Lead acid batteries use an acidic electrolyte (sulfuric acid).
