

## Which power plug is easier to unplug the battery

Should you unplug a laptop battery when fully charged?

However, you should NOT unplug the battery when fully charged. Every time you unplug the power and use it on battery, you degrade the battery; they are only good for a finite number of charges. In addition, if you use it on battery at your desk, and then need to go portable, you might not have much use time left.

Should you unplug a lithium ion battery?

Some of this is true for ALL Lithium-ion batteries. However, you should NOT unplug the battery when fully charged. Every time you unplug the power and use it on battery, you degrade the battery; they are only good for a finite number of charges.

Does plugged in AC adapter harm battery?

Hi rooney10057, Welcome to the Community, The power supply to the battery is automatically cut off once the battery is 100% charged. So even you keep the AC adapter plugged in it does not harm your battery. However to save power it's better to unplug and continue to use the system with battery once battery is fully charged.

Should you leave a laptop plugged in after a full charge?

Every company has its recommendation on whether or not to fiddle with the battery pack or leave the device plugged in when the battery holds a complete charge. HP states that a laptop shouldn't be subjected to continuous charging for more than two weeks at a time. Acer wants you to remove the battery when plugged in at all times.

Should I Keep my Computer plugged in while the battery is fully charged?

Keeping your system plugged in while the battery is at 100% charge won't be a problem if you're working at cool temperatures. However, if the temperatures are elevated and the battery is fully charged, it can potentially damage the battery. If you remove the battery, don't store it in a discharged state.

Should I Disconnect my computer from power if the battery is full?

If you are asking if you should disconnect your computer from power once the battery is full, the answer is no. If you do so, your battery will keep discharging and charging. The number of times batteries can be charged is limited and if you unplug your computer every time it is full, it will quickly die.

Laptops do not draw power from the battery when plugged in. The battery will continue to charge overnight, but the laptop will be powered by the AC adapter. If you unplug the AC adapter, the laptop will switch to battery ...
